To whom it may concern,

We are against the proposed cell tower to be located in the city on southend road. There are many more appropriate locations in this valley for such a tower, which would not be so near to the population. Another similar proposal has already been rejected and hope that this one will also be rejected.

There are serious risks to the health of children, pregnant women, fetuses, men, pets and animals raised for human consumption.

Cell towers emit radiation and children living near them have been found to develop leukemia at 3 times the rate of children living over 7 miles away.

If you live within  $\frac{1}{4}$  mile from a cell tower, you may be at risk of serious harm to your health. Cancer rates more than triple among people living within 400 meters of a cell tower. Those who live within 100 meters of a cell tower are exposed to radiation at 100 times the normal levels. The risk of cancer quadrupled among people living within 350 meters of a cell tower and 7 out of 8 cancer victims were women. Levels of radiation emitted from cell towers can damage cell tissues and DNA, causing miscarriages, suppressing immune function and causing other health problems and deformities to people and animals.

Cell phone companies will pay a lot of money a month for rent for the use of the property that the tower would be located on, without regard to any ones health or lives.

Also this kind of tower causes the property values to go down.

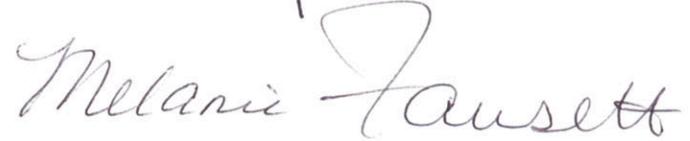

Please protect our children, grand children, families and the citizens if this community. DO NOT ALLOW THIS PROPOSAL.

Sincerely,

Tim & Melanie Fausett
